NIH/NIMH

Testing an IHCA for Guardians of Survivors of Intraparental Homicide

This proposal is to test an interactive health communication application (IHCA) as a way of providing information and support to the guardians of these child survivors of IPH. Use of IHCA has been found to be effective for a variety of other health conditions such as women with breast cancer and children with asthma and their parents. This proposal therefore offers an opportunity to address both an understudied topic as defined by the NINR and a substantial source of health disparity.

Role: PI

64199, Robert Wood Johnson Nurse Faculty Scholars Program 9/1/2008-8/31/2011

Testing a Computerized Safety Planning Aid for Survivors of Intimate Partner Violence

This is a randomized clinical trial of a computerized, individualized safety planning aid for women seeking protective orders for intimate partner violence.
