

ACKNOWLEDGMENTS

This volume could not have been compiled without the essential assistance of the local mental health providers and the State mental health agencies that contributed data on program operations. Compilation of these data was greatly facilitated by the National Association of State Mental Health Program Directors, the American Hospital Association, and the National Association of Private Psychiatric Hospitals.

The National Center for Health Statistics contributed staff and computer time toward the production of the chapter on care of the mentally ill in nursing homes. Similar contributions were made by the American Psychiatric Association, the American Psychological Association, the National Association of Social Workers, and the University of Virginia School of Nursing toward the chapter on Human Resources in Mental Health.

All support and assistance are gratefully acknowledged.
